HAND WASH STATIONS AND BASINS

Acorn® washbasins offer durability, style, and flexibility when outfitting commercial restrooms. Single units made of heavy-gage stainless steel are ideal for institutional and commercial applications. Multi-user stations are available in a variety of materials and designs, including stainless steel and solid surface.

Our newest addition to the handwashing product line, Vari-Slab® Configurable Basins, is designed to streamline the specification process and make placing an order as easy as 1, 2, 3! Choose a length—from one to four stations—to suit your needs; a bowl shape—square, rectangular, round or oval—to suit your aesthetic; and a color to suit your décor.

ACORN
BEEKEEPING EQUIPMENT

Acorn Beekeeping Equipment was started in 2013 to satisfy the needs of commercial, sideline, and backyard beekeepers worldwide. We had one goal—design and produce the highest quality one-piece plastic bee frames, foundations, and drone combs on the market.

We think that bees deserve the best because of the vital role they play in human survival. Everyone knows that bees produce high-quality food—honey and jellies. But did you know that beeswax, propolis, and honey bee venom are used

in healthcare products? Still, the greatest contribution bees make is the pollination of nearly three-quarters of the plants that produce 90% of the world's food.

All of our products are custom molded and waxed in our California plant. We use only 100% pure, high-quality beeswax. Our commitment to quality is why we sell over one million frames and foundations each year, and why our products are used around the world.

ACORN BEEKEEPING EQUIPMENT

SINCE 2013

ACORN BEE FRAMES

WWW.ACORN-GENCON.COM

Acorn-Gencon started out molding all the plastic parts for the MGI family of companies. For over 20 years, we've been providing complete injection molding solutions, from concept to completion, for enterprise-level manufacturers to entrepreneurs.

With one of the industry's most substantial diversity in press sizes, we are equipped to provide precision molding with tight tolerances for the electronics industry as well as large-tonnage molding.

For companies looking to have parts manufactured in the USA, we offer a unique advantage. We are located just outside of Los Angeles, California—just a short distance away from major ports and distribution centers.

Besides molding, we also do assembly, packaging, warehousing, and with Amazon distribution centers just 20 minutes from our facility, we can run drop shipments direct each day, making us a one-stop shop for entrepreneurs.

Whether you are looking for component parts or finished products, we operate 24 hours a day, five days a week, enabling us to provide prompt turnaround on all orders.

Accidents in the workplace happen. While we hope you will never have to use your safety system, we know how important it is for the equipment to work when needed.

Acorn Engineered Systems provides indoor and outdoor water tempering and emergency drench systems for a variety of industries. We specialize in creating systems for water treatment and petrochemical plants, healthcare and pharmaceutical operations, manufacturing facilities, power generation and utility operations, and high-tech manufacturing facilities.

We understand that each facility is unique and faces its own plumbing challenges. There are times when off-the-shelf safety products are not adequate for the situation. That's where we excel.

We work directly with design engineers and architects to design and customize specially tailored watering tempering system for your facility.

ACORN ENGINEERED SYSTEMS[®]

SINCE 2017

When we launched Acorn Controls in 2013, we didn't just want to improve on what was already available. Our goal from the very beginning was to start from scratch and re-think controls completely.

What we accomplished in that short time was the engineering and production of the best controls available to ensure bather safety and comfort. Our controls and valves are also easy to maintain and have a low cost of ownership despite their complexity.

Today, our focus is on digital solutions that alert the building owner to problems of which they would otherwise be unaware.

This way, instead of performing maintenance on a fixed schedule whether the equipment needs it or not, maintenance can be performed on a facility's preferred schedule.

We continue to invest in innovations (such as sensors to detect anomalies or dangerous bacteria and viruses in water) in order to further deliver on our promise of safety and comfort.

Acorn Safety is a proud manufacturer of the industry's leading emergency drench equipment and safety plumbing products. Typical customers in the commercial and industrial markets include hospitals, pharmaceuticals, manufacturing plants, utility and maintenance rooms, laboratories, and more. They turn to us because of the reliability of our products.

All of our safety products are constructed of stainless steel and anti-microbial plastics, materials that provide durability to emergency tempering fixtures. All of these are capable of integrating with an industry first digitally controlled emergency tempering system.

A safety shower or eye wash station is something you hope you never need to use, but it is crucial for it to work when you need it. We understand and value the importance of these products, and we will continue to invest in new technology. Enhancements such as automatic testing and alerts are on the horizon, which will provide our customers with additional protection.

SINCE 2008

ACORNVAC.COM

When we started vacuum plumbing back at the turn of the new millennium, AcornVac's inherent security advantages made correctional facilities a natural area of focus, while its flexibility made it an ideal solution for grocery stores. Today, however, we have a presence in almost every market.

This widespread presence is because architects, building owners, and contractors understand the value of vacuum plumbing. It is a portable, flexible plumbing infrastructure that offers solutions for challenging projects. Those challenges can be due to site conditions, structural issues, or even just tenants who cannot be disrupted by construction going on above them.

AcornVac Plumbing Systems include toilets that are designed to eliminate splash and plume by drawing air into the toilet with every flush.

Healthcare institutions favor AcornVac systems because vacuum plumbing promotes a healthier environment. Our waste piping doesn't leak, and our toilets do not produce unsanitary flush plumes.

We believe that as more people discover the convenience of vacuum plumbing, it will be the new basis of design for plumbing and drainage.

CREATING A NEW BASIS OF DESIGN IN PLUMBING AND DRAINAGE

A versatile plumbing solution that moves waste up and out.

ACORNVAC[®]

SINCE 2000

Since 1966, Chronomite has engineered and manufactured point-of-use electric water heaters for the commercial and residential market.

Every single part of our robust, energy-efficient water heaters is made right here, in North America, by us. This means components, such as flow switch mechanisms, are consistent throughout our entire line of heaters.

Not only do our customers—owners of multi-unit dwellings, hotels, and institutional, hospital, and commercial properties—turn to us for an energy-efficient solution, they recognize our safety value as well.

Chronomite water heaters add a layer of protection against the spread of Legionella, a growing problem around the world. Lukewarm standing water is an ideal breeding ground for this dangerous bacteria. By heating water at the point of use, Chronomite® water heaters minimize the amount of warm water lying in the pipe and help to prevent the spread of Legionella.

Ideal Applications:

Manual, metering, or sensor handwashing faucets; dual hand washing sinks; kitchen sinks; bar sinks; utility sinks; water saving showers; standard showers; dishwashers; washing machines; mop sinks; bathtubs; emergency eye washes; and emergency eye/face washes.

Elmdor's quality, availability, and service have customers from just about every market imaginable coming to us again and again whenever they need access doors and roof hatches. With our extensive inventory and range of stock available, we can have your part on a truck the same day you order it.

Besides stock orders, we welcome and accommodate custom orders. Every door we make starts in our North American factories as a custom sheet of steel. It is then fabricated, boxed, and shipped from the same location.

We intend to continue producing high-quality stainless steel products that our customers love. We will also continue investing in new product development and expanding to new markets to serve our customers no matter where their project is located.

FIRE PRO[®]

SINCE 1979

POTTERROEMER.COM/FIRE-PRO-EQUIPMENT

Since our inception in 1979, Fire Pro's mission has been to manufacture quality fire protection products at an affordable price with short, reliable lead times. That still holds true today and is part of what makes us a thriving division of Morris Group International.

Our monitors are essential fire protection equipment in the mining industry, oil refineries, marine applications, wastewater plants, wildland vehicles, chemical and petrochemical settings, and more—but our equipment is also used for dust abatement, cleaning, and many other tasks that require precise, high-flow water delivery.

We recognize that every application needs the right solution. For many customers, we can meet their needs with one of our standard, existing products. For others, we will go out of our way to design and create a custom product that precisely addresses their needs.

From conceptualization and design to installation, calculation, troubleshooting, and even maintenance, we're happy to work with you. If you need 100 units or a one-off, custom-tailored system, we guarantee you the best in support, reliability, and value.

MORRISINDUSTRIES.COM.MX

Fabricación y Manufacturas de México S.A. de C.V. is the Mexican manufacturing facility of Morris Group International. With 600 employees and 400,000 square feet of manufacturing and office space, F&M México provides essential manufacturing power to Morris Group International.

F&M México specializes in products fabricated from stainless and galvanized steel, terrazzo, plastic, solid surface materials, and cast iron. Our manufacturing capabilities include fabrication, assembly, wet and powder coating, and polishing. Products made at F&M México are distributed throughout Mexico by Morris Industries Mexico.

We pride ourselves in our ability to create high-quality, unique, custom solutions for customer needs. Morris Industries Mexico supplies fixtures to schools, correctional institutions, and commercial and government buildings.

F&M México has received several awards in recognition of our commitment to quality manufacturing practices, and, with Morris Industries Mexico, continues to lead the industry in producing high-quality, beautiful, and durable fixtures.

FABRICACIÓN Y MANUFACTURAS DE MEXICO S.A. DE C.V.[®] SINCE 1989

JRSMITH.COM

Today, Jay R. Smith Mfg. Co. boasts more than 65 service centers around the world—but in 1926, it was just an idea. A salesman for the National Lead Company, Jay L. Smith saw a market need for quality plumbing products. He enlisted the aid of his son, Jay R. Smith, and an industry leader was born.

Today, Smith® produces a wide range of innovative industrial plumbing products spanning everything from floor drains to electronic trap primers. Thanks to our long history in the industry and the expertise of our engineers, we understand many of the challenges facing our customers. Our Labor Saver® line is specially designed to minimize many of these frustrations.

We at Smith pride ourselves on being customer driven. We never turn down a challenge, specifically when it offers us the opportunity to create a custom product to fit a customer's needs. No matter what that challenge is, we rise to meet it.

LARSEN'S

SINCE 1958

Larsen's is one of the most experienced fire equipment cabinet manufacturers in the United States. The company began in 1928 as a metal job shop. In the 1960s we created our own branded line of fire cabinets that were both effective and architecturally pleasing, unlike the other products on the market at the time.

Over the years, we have been continually innovating with material, design options, and specialized features for specific applications. This has made our fire extinguisher, hose and valve cabinets a true specified, architectural piece of equipment and a favorite of building owners, designers and architects.

However, people do not specify our cabinets just because they are pretty. They turn to us because we offer an unsurpassed level of quality across our entire product line. That line now includes fire extinguisher cabinets, hose and valve cabinets, fire blanket cabinets, detention fire equipment cabinets, marine and industrial cabinets, and a complete line of access panels.

Customer service is our cornerstone, and we hold on to our small-business roots. One call gets you all the answers you need.

CROKER.COM

In 1911, Chief Edward F. Croker of the New York City Fire Department resigned from the force after 27 years of service. He tendered his resignation as a result of the tragic Triangle Shirtwaist Factory Fire; he felt he could be of greater service by putting his wealth of experience “at the immediate disposal of the public in order that it may be applied to the other end of our common problem—the prevention of fire.”

Since 1911, Croker Fire Prevention has been a trusted name in the fire prevention industry. Manufacturing a wide range of products from fire hoses to extinguisher cabinets and everything in between, Croker spans the breadth of the industry.

We at Croker rely on the expertise of our employees to continually develop innovative new fire protection products. For more than a century, Croker Fire Prevention has been the trusted name for quality fire prevention products.

Chief Edward F. Croker

CROKER SINCE 1911

FIRE-TMEND
SINCE 1930

FIRE-END.COM

In 1930, Anthony J. Sposato, Sr. founded Fire-End. In the beginning, Fire-End's main business was selling and servicing fire extinguishers and providing municipal firefighting supplies to New England dealers.

In 1946, Anthony Sposato, Sr. handed the business off to his sons Anthony Sposato, Jr. and Joseph Sposato. Under their leadership, Fire-End grew to become a dominant leader in the field of fire equipment.

Today, Fire-End remains a third generation Sposato family business under the leadership of Paul Sposato. Our products are used throughout the world in municipal and interior fire equipment markets. Today, Fire-End distributes safety gear not only to firefighters, but also to EMS, Law Enforcement, and Military professionals, among others, making Fire-End truly "The end-all in fire safety."

Murdock is a sixth-generation, family-run company that has always had one goal—access to clean, safe drinking water for all.

When you turn to us for drinking fountains, bottle fillers, water coolers, or hydrants, you get nearly 170 years of experience, knowledge, and innovation. To this very day when you call us, you can get a Murdock on the phone.

No matter where you go in the world, you've probably had a drink from a Murdock product, whether from an antique fountain installed at the turn of the 20th century or a brand-new, high-tech bottle filler in your child's school. You may even have watered your flowers from a hydrant installed at a veteran's cemetery.

We will continue to develop high-quality, innovative products that ensure all living things on our planet have access to safe water.

SINCE 1853

POTTERROEMER.COM

Potter-Roemer's history is very similar to that of Acorn Engineering Company. We started in 1937 as a manufacturer's representative agency, but in our case, we were representing fire protection equipment.

Today, Potter-Roemer is the recognized leader in fire protection equipment. In industrial, commercial, institutional, and high-rise buildings, water pressure control is crucial for fighting fires. Installing contractors of these types of structures turn to us for their fire protection needs.

The advantage of Potter-Roemer is that we engineer and manufacture all components of our products, starting with a sheet of metal. Our sheer size allows us to offer the best prices for our customers.

We like to think of ourselves as an old company with young ideas. We are always looking for ways to improve our current line and add new items to our offerings based on the needs of our customers and the contractor.

LIGATURE-RESISTANT PRODUCTS
DIGNITY SUITE™

Since 1946, Whitehall Healthcare has focused exclusively on providing plumbing solutions to meet the unique needs of our healthcare clients.

Our products are engineered, designed, and manufactured to aid in the efficient delivery of high-quality care to patients in hospitals, behavioral healthcare facilities, addiction treatment centers, and clinics.

Not only do we consider the provider's needs to be the driver behind our product creation, we hold the patients' best interests in mind as well through our use of Universal Design principles.

We strive to take the stigma out of the healthcare system with aesthetically pleasing ADA- and bariatric-compliant fixtures and accessories that are also ligature-resistant, in order to offer greater protection to the most vulnerable patients.

SINCE 1946

WHITEHALLREHABILITATION.COM

Whitehall Manufacturing® got its start during World War II as a key manufacturer of the rehabilitation whirlpool to aid in the recovery of injured soldiers.

Since 1946, the rehab side of our business has expanded, but remains focused on providing tools for injury recovery. We serve physical therapy, occupational therapy, podiatry, chiropractic, oncology, and long-term care providers as well as spa facilities.

One of our largest growing markets is sports medicine and rehabilitation. If you have ever seen a whirlpool in the background during an interview with an athlete after a big game, it was most likely a Whitehall® whirlpool. In fact, we provide the largest full-body tank on the market today.

We will continue to engineer, design, and manufacture rehab products to meet the needs of athletes and healthcare providers around the globe.
